SUMMARY

Early-career software developer building web applications with React, Next.js, Node.js and Python, including AI API integrations and computational life-science projects. Combines software development with a Biochemistry and Molecular Biology background. Focused on reliable, user-focused applications, practical API integrations and scientific software

EXPERIENCE

AI Front-end Engineer | Flyrank AI 07/2026 - 10/2026

• Built user-facing interfaces for AI workflows and integrated schema-based response handling to make model outputs more predictable.

Drug Discovery Simulation Analyst | LifeArc Biology Research Job Simulation 01/2026 - 02/2026

• Ranked and filtered drug candidates using multi-parameter analysis in a simulated research workflow.

IT Infrastructure Intern | Dejavu Technologies 07/2024 - 12/2024

• Troubleshot hardware and software issues across multiple sites and supported network-topology man agement.

SELECTED TECHNICAL PROJECTS

Bio-Dock

- Built a full-stack bioinformatics platform for molecular-docking workflows and 3Dvisualisation, with AI-assisted interpretation of computational outputs.

Post-Matic

- Developed a web application for automated content generation and publishing through connected API workflows.

G2G Biochemistry Community Hub

- A full-stack academic platform bridging the gap between scientific learning and professional career growth for biochemistry students at the University of Nairobi. Features peer resource sharing, real-time networking, and mentorship hubs.

EDUCATION

BSc. Biochemistry & Molecular Biology - University of Nairobi 2022-2026

CERTIFICATES

- AI Technical Foundation
Qualcomm Academy

- Introduction to Programming
Saylor Academy

- Introduction to Artificial Intelligence
Simplilearn SkillUp

- Certified AI & Claude Specialist
Anthropic Academy

SKILLS

- **Languages & Web:** Python, JavaScript, React, Next.js, Node.js, Tailwind CSS, REST APIs
- **AI & Data:** LLM API integration, prompt engineering, data pipelines, Pandas, computational life sciences, molecular docking, quantitative modelling
- **Tools & Deployment:** Git/GitHub, databases, Render, Vercel, web deployment

LANGUAGES

- **English**
- **Swahili**
- **Chinese –** basic
